Power supplies PSxM are overcurrent protection devices，because it turns power supplies off，if the output current exceeds more than $30 \%$ of the rated output of the power supply．Therefore，these units are not intended to supply e．g．halogen lamps，because the starting／inrush current（in the cold state）is approximately ten times the amount of the steady－state operating current．So these power supplies cannot turn on such lamps．

## Characteristics

Rated output voltage 12 or 24 V DC with the possibility of regulation．
－High efficiency of up to $90 \%$ ．
－Low ripple \＆noise．
－Protection：Over load，Over voltage and Short circuit．
－Continuously adjustable output voltage to adapt to the specific application，e．g． the need to compensate for the voltage drop caused by the length of the line．

## Warning

Device is constructed for connection for 1-phase main alternating -current voltage and must be installed according to norms valid in existing state. Connection according to the details in this direction. Installation, connection, setting and servicing should be installed by qualified electrician staff only, who learn this instruction and functions of device. For right device protection should be fronted-end certain element. Before starting installation must be main switch in position "SWITCH OFF" and device should be out of voltage. Don't install device to suppliers surcharge electro-magnetic interference. By right installation of device is provide good air circulate to don't pass maximal operating temperature, in case of higher ambient temperature and permanent working. For installation and setting use screw-driver cca 2 mm . The device is full-electronic - installation should be effected according to this. Function without problems is too dependent on previous type of transportation, storing and manipulation. In case of any vestige of destruction, deformation, non-function or missing part, don't install and made claim to seller. Product may be, after passing operating time, disassemled, recycled or puted on protected tip.
